Figure. Suggested Use of the GlycoMark® Test

- **HbA1c Level 6.5% to 8.0%**
  - **1,5-AG < 8 µg/mL**
    - High PPG excursions likely; consider more intensive PPG monitoring and/or initiating PPG-targeting agents
  - **1,5-AG ≥ 8 µg/mL**
    - Normal PPG excursions likely; consider targeting mean or fasting glucose

HbA1c indicates hemoglobin A1c; 1,5-AG, 1,5-anhydroglucitol; and PPG, postprandial plasma glucose.
