Consider future reevaluation:
• During 1st year of life,
• Annually from age 1 to 6 years, and
• Biennially from age 7 to puberty.

Microarray findings with uncertain clinical significance or an abnormal result in a clinically relevant gene or region should be followed-up with parental testing that may distinguish pathogenic from benign results.

This figure was developed by Quest Diagnostics based on references 1-4. It is provided for informational purposes only and is not intended as medical advice. A physician’s test selection and interpretation, diagnosis, and patient management decisions should be based on his/her education, clinical expertise, and assessment of the patient.
