

Caring for patients with complex kidney conditions means making countless critical decisions

Quest Diagnostics supports you with comprehensive solutions and attentive service across every phase of your patient's journey

We work behind the scenes to extend your capabilities—bringing the scale, technical depth, operational reliability, and service discipline that can help your practice move confidently from early detection through advanced disease management.

In nephrology, where dense, evolving data shapes every treatment pathway, dependable diagnostics are essential. From adjusting therapy to planning for dialysis or transplant, your decisions rely on precise testing, consistent monitoring, and a service experience designed to keep your workflows moving without interruption.

Your single source for timely, accurate diagnostic insight

Your patients move across clinics, dialysis centers, and specialists—and they rely on you to keep their care connected. That's only possible when results look the same wherever they're collected. Consistent testing and reporting reduce guesswork, speed decisions, and minimize the workarounds that strain care teams. **With one dependable lab behind the scenes, your focus stays where it belongs: supporting your patients, not managing processes.**

	 Risk assessment and early detection	 Workup and diagnosis	 Progression management	 Dialysis	 Transplant	 Post-transplant (long-term management)
Chronic kidney disease (CKD)	Kidney Profile (eGFR + uACR) with KDIGO heat map dynamic reporting	- eGFR creatinine-cystatin C - Glomerular disease workup - Immune, autoimmune, and complement - Genetic testing (Athena Diagnostics®) - Renal pathology and consultation (AmeriPath®) - Bone mineral metabolism		- Full suite of clinical testing - Dialysis adequacy calculations - Environmental testing for all dialysis modalities	- Specialty transplant services with HLA testing and infectious disease testing for donors - Accelerated turnaround time	- Infectious disease testing for recipients, with accelerated turnaround time - Immunosuppressant drug level monitoring - Quantitative viral monitoring
Comorbidities and complications	Comprehensive test menu spanning early identification of cardiometabolic risk and accurate endocrine disorder diagnosis with enhanced reporting	- Insulin resistance, glycemic control - Infectious disease screening algorithms - MASH liver fibrosis assessment - Inflammation markers - Advanced lipids - Mineral and bone disorder - Anemia				
Hypertension	Guideline-supported tests for evaluation of secondary causes of hypertension	Testing for primary aldosteronism, the leading endocrine-related cause of secondary hypertension, with guideline-adjacent algorithm				
Kidney stones	Comprehensive testing of patient-specific identification for known, or suspected, kidney stone formers	24-hour urine analysis - Stone analysis with image - Primary hyperoxaluria urine and genetic testing				

Connecting all phases of kidney care helps improve outcomes

- **Informed continuity:** Supporting the complete patient journey for a more informed hand off to your specialty care
- **Provider insights:** Trended results and expert consults when cases get complex
- **Patient engagement:** Easy-to-understand, trended lab results that support adherence
- **Lifestyle and genetics support:** Resources and counseling that guide next steps
- **Stronger care continuity:** Smoother transitions across settings and teams
- **Earlier interventions:** Proactive care that helps improve outcomes

Turning vital data into confident kidney care decisions

One trusted source for a complete kidney care picture

Every treatment decision you make in kidney care depends on accurate values, clear trends, and information that stays aligned across settings. Quest delivers reliable diagnostic data, connected digital tools, and nationwide access—**helping ensure each decision is timely, informed, and coordinated across the care team.**

Comprehensive kidney health insights

Our portfolio spans routine chemistry and hematology, renal and metabolic panels, autoimmune and complement testing, molecular and genetic diagnostics, anatomic pathology, and transplant diagnostics—enabling confident decision-making throughout the care journey.

In addition, our testing approach aligns with evidence-based guidelines from the American Heart Association® and the National Kidney Foundation®, reinforcing best practices across nephrology, cardiometabolic care, and related clinical areas.

Efficiency at scale

Our nationwide network brings together trusted laboratory expertise, standardized workflows, and reliable logistics to deliver every test—from the most routine to the most complex—with accuracy and timeliness, wherever care happens.

We further expand access by offering affordable testing options and maintaining strong nationwide in-network coverage, helping reduce out-of-pocket costs and advance equitable care.

Care continuity and connected data

With integration across 1,000+ EHRs, lab data flows seamlessly into your existing workflows.

Digital tools such as Quantum® Lab Services Manager and the MyQuest® patient portal place the right information in the right hands at the right time—keeping care teams aligned and decisions consistent throughout the patient journey.

Service excellence

Your practice is guided by a dedicated, specially trained nephrology account manager and a project management team that oversees onboarding and ongoing performance.

Our Nephrology Concierge team handles specialty-specific needs, freeing office staff to focus on patient care.

Technical specialists, custom reporting, and billing resources remain readily available. Dialysis account services ensure continuity across every phase of care.

Beyond operational performance, we provide patient-facing education and billing resources, including affordability programs such as our Patient Assistance Program, designed to reduce financial barriers and improve the overall patient experience.

A focus on the patient, not the process

Diagnostics across the kidney care continuum

- 3,500+ routine and advanced tests for renal disease and comorbidities
- Clinical laboratory depth in areas that intersect with kidney care, including cardiometabolic and endocrine health, toxicology, infectious disease and immunology, molecular genomics and oncology, neurology, and women's and reproductive health

Clinical insight backed by subspecialty expertise

- A team of 850+ MDs, PhDs, and multidisciplinary clinicians across the clinical portfolio, including nephrology
- Consults with medical directors and clinical educators
- Dedicated kidney-care service teams focused on the specific needs of nephrology practices

Reach and reliability your practice can depend on

- In-network for >90% of covered lives nationwide
- Nationwide logistics and courier network designed for reliable transport and consistent turnaround times
- ~8,000 patient access points, including ~2,400 Patient Service Centers
- Extensive local laboratory presence with 36 sites enabling reliable, regionally aligned operations^a

^a Not including Quest clinical trials locations.

Experience clarity at **every stage of kidney care**

Tools and services that connect data and keep care moving

- EHR integration with 1,000+ systems for seamless ordering and results delivery
- Technical account teams that handle day-to-day needs such as supply ordering and result retrieval
- Critical value calls that route urgent results immediately—so care teams can act without delay
- Stat and same-day testing^b for expedited turnaround when faster clinical insight is required
- Copy-to result sharing that automatically distributes electronic results to ordering clinicians and designated partners—such as PCPs and dialysis clinics—keeping all care providers aligned^c
- MyQuest® patient portal that keeps patients engaged—from reviewing results to scheduling appointments and receiving reminders that reinforce adherence to care plans
- Integrated ordering, tracking, and result review through Quantum® Lab Services Manager and mobile app for on-the-go access
- Clinical testing and dialysis calculations for >200,000 dialysis patients weekly
- Population-level insights that identify gaps in care and enable proactive risk management

Specialized genetics, pathology, and transplant expertise

- Renal pathology expertise through AmeriPath®, a Quest Diagnostics company
- White-glove support for immunogenetics and transplant testing—coordinating pre-, match-, and post-transplant workflows with expedited turnaround times
- Renal genetic testing through Athena Diagnostics®

^b Available in many areas; check with your local representative for more information.

^c Copy-to results functionality is supported for Quest clients, however it may not be accessible to all external organizations such as Fresenius clinics at this time. Check with your local representative for more information.
