

Quantum[®]

Enterprise Content Solutions

Release Summary

Quantum Enterprise Content Solutions 10.0 release highlights

We continue to create functionality that enables healthcare organizations to achieve enterprise-wide content management, transforming data and documents to support and improve patient care, drive operational efficiencies, and help lower costs.

Upgrade to the 10.0 release to boost your organization's enterprise content management with:

- **Intelligent Data Capture (IDC)** tools to quickly and accurately capture content for immediate access, along with 2 new reports
- Enhancements for chart search and a new **Optical Character Recognition (OCR)** search for image-based documents within the document viewer*
- Web functionality support related to **Messaging, Completion, and Chart Search**
- Support of current versions for many third-party components

Intelligent Data Capture

Chart and folder selector. When validating batches in IDC, the medical record number or account number may be missing or invalid on a document. To ensure that chart documents are being associated with the correct chart, or folder documents are being associated with the correct folder, users can now access the newly added *Chart Selector* or *Folder Selector* located within the IDC application to search for the corresponding chart or folder. Previously, the user would open another application to search for the correct chart or folder.

Attribute selector. This new page in IDC shares a similar approach as the *Chart Selector*, enabling users to search for documents by owner name while providing a more user-friendly interface for assigning values to attributes associated with the document type.

New reports

Completed Batches Report. This report displays all batches exported by a user, organized by *Batch Class* and *Batch ID*, and can be filtered by *Completed Date* and *Batch Class*.

Scanning Reconciliation Report. Like the *Reconciliation Report*, this report provides detailed information about all of the documents created in the application but with the added ability to select a *Document Set* filter. It also features a new column on the report page, *Batch ID*.

Search enhancements

Chart search. Enhancements have been made for chart searches, including two new panels on the *Chart Search* page, as well as enhancements related to viewing denied charts on the *Chart Search Results* page.

Document viewer. Enhancements have been made to the *Document* panel that enable users to perform OCR on image documents in supported formats (.tif, .png, and .pdf).*

*Contracted add-on.

Quantum[®]

Enterprise Content Solutions

Release Summary

Quantum Enterprise Content Solutions 10.0 release highlights

Managing documents enhancements

Document management. The following enhancements are now available when using the web-based *Document Management* features:

- Check-in/Check-out documents
- Delete documents
- External references
- Manage annotations

Check-in/Check-out documents. Documents in the Quantum ECS desktop application are automatically checked in and out when a user edits and saves in the editor. PDFs can be manually checked in and out for editing in an external application.

Security enhancements

Security Manager—Document deficiency. System Administrators are now prevented from unchecking the *Current Staff*, *Clinician*, or *Login Allowed* fields in *Security Manager* for a user if the user currently has outstanding deficiencies.

Enhanced auditing. Document level auditing is now included in the Quantum ECS audit log. The enhanced auditing will have an impact on the Quantum ECS audit message storage. Please refer to the full release notes for a recommendation on table space requirements.

Other enhancements

Messaging. Users can now send, receive, reply to, and forward messages from anywhere in the application, with and without the context of charts, folders, or documents.

Signing a document. Signatures can now be added to a document by either completing a signature deficiency via the signature box, or by simply clicking *Place Signature* for a document without a deficiency.

Single sign-on (SSO). Customers can now use the SSO functionality to launch directly to the *Chart Search Results* page.
