Please Note:

It may be necessary at times to refer some testing to other Quest Diagnostics facilities or Reference Laboratories. When this is done this information will appear on the laboratory report. In addition you will be sent a copy of the relevant referral laboratory certificate with the initial investigator supplies.

On a regular basis the accreditations/certificates held by our laboratories need to be renewed. The processes for the renewals vary depending on the accrediting agency. Some agencies perform an onsite inspection while others require renewal application forms and supporting documentation. Due to the varied requirements of the renewal processes and the time it takes for certain agencies to process the renewals and issue a new accreditations/certificates, there may be a period of time where the date on the existing accreditations/certificates has expired. This does not mean that the laboratory is not accredited.

The laboratory continues to be accredited during the time that the agency requires to process the renewal accreditations/certificates. Please use this document as evidence that the laboratory has completed the necessary application and/or inspection and has not been notified that the laboratory is not accredited.

When the new accreditations/certificates is received it will be available to you on our website: [http://www.questcentrallabs.com](http://www.questcentrallabs.com). Any additional licenses and/or accreditations/certificates not listed above, which are held by each of our laboratories are also available on our web site. You may contact the Project Leader or Study Monitor if you do not have web access.

Expected availability for accreditations/certificates after expiration date is:

**CAP Accreditation:** 8 to 12 weeks after inspection (inspections are usually performed the month or month after the expiration date).
